**Subject:** Update on Minerals

I thought that you might be interested in the minerals available at Denver. There is a superb lot of old kyanite fromn Brazil that I was able to highgrade. From Russia , there are very good galena, sphalerite, Japanese twin quartz, beta quartz, galena after pyrrhotite ( very good smaller pieces), fluorite, galena on chalcopyrite, very fine citrine (including large matrix pieces), datolite on quartz, calcite, manganoaragonite, new quartz, amethyst with druze, and old classics. From China, there are excellent fluorite, hematite in quartz (so many mines are having problems due to the flooding).

Thus far I have been able to acquire the best of what has been available.

Please notify me if you are looking for anything.

Chris
