**Subject:** Greenside Minerals - New Specimens

Hi,

The main feature of our first preview in 2007 is a set of miniature vanadinite specimens from Morocco. Each one consists of clusters of gemmy orange crystals on a small amount of matrix. One specimen comprises an attractive scattering of vanadinites on snow-white bladed baryte. Also included are 2 fluorites, erythrite, hematite and calcite from Morocco.

These specimens will not be available for non-registered users to view until the end of the week

Happy New Year and thank you for your support during 2006 - our first year!

Regards,

Gary Atkinson
