Subject: Greenside Minerals - New Specimens

Hi,

Our latest update features a number of specimens from England and includes campylite var. mimetite from Dry Gill in the Caldbeck Fells, attractive malachite from the county of Shropshire and baryte from Sidmouth, Devon.

But the star of this update is a classic witherite from Alston in the Northern Pennines Ore Field as featured in the most recent issue of Rocks & Minerals magazine.

Regards,

Gary Atkinson
