Subject: Greenside Minerals - New Specimens

Hi,

Our second update for 2008 consists mainly of English baryte, titanite and felsöbányaite. The baryte comes from Dorset and Yorkshire - the latter being of particularly good quality. The titanite is from the famous Shigar Valley, Pakistan location. We also include blue fluorite from the Florence Mine in Cumbria and a fine chalcopyrite / quartz combination from Romania.

Regards,

Gary Atkinson
