Dear Dave Barthelmy

We've been pretty busy this week having purchased a collection and had the pleasure of putting it together to list.

This collection includes some very interesting and slightly eccentric specimens.

We think one of the most interesting is a sample of very rare green anglesite crystals from Broken Hill, NSW, Australia. To add interest to this specimen it also contains a series of native lead nodules. Both of these two minerals are considered highly desirable collectors items. To have a specimen containing both is quite a privilege.

This week we are introducing gift vouchers to our service to allow our clients to give a meaningful gift to a fellow collector.

In the last few days we have obtained another collection that contains some specimens that are of true museum quality. We will be adding these to our site over the next week so be prepared to for some impressive viewing.

We are also having a promotion of our stock on e-rocks. You can see our pages on e-rocks [here](#).

Best wishes

Susan and Bruce

NB: If you are having trouble displaying the images in this newsletter, you may need to click the 'display content' link at the top of your page. Also, adding our email address to your address book will in many cases solve the problem.

## Gift Vouchers

Our new Gift Certificates are a great gift idea for any of your mineral collecting friends. When

your friends and relatives can't think of what to get you for your birthday or other significant event, don't forget to remind them that our gift certificates are only a few keyboard clicks away!

## New Stock

### **Gift Certificate**

\$250 Gift Certificate to purchase from AA Mineral Specimens website.
