Subject: Greenside Minerals - New Specimens

Hi,

Our second update of 2009 consists mainly of some aesthetic cactus quartz specimens from the famous Magaliesberg Mountains location in South Africa. To these we've added a miniature pyromorphite from the Caldbeck Fells; smithsonite from Tsumeb; vesuvianite from Italy and 2 pargasites from Pakistan.

Our next update will feature zeolites from India: including fine miniature green apophyllite and stilbite, excellent cavansite and unusual red thomsonite.

Kind regards,

Gary Atkinson
