Subject: Greenside Minerals - New Specimens

Hi,

Our latest update features part of a newly acquired set of zeolites from the Deccan Traps, India. It includes two different forms of apophyllite (one slightly frosted, and other water-clear and mint-green), classic cavansite, 3 mordenite pieces and a single Himalayan quartz.

We have also recently added a new feature to the website: It's called My Favourites. With My Favourites you can add any number of specimens to a special page that allows you to view them all together. This will be useful if you want to compare several similar specimens with a view to purchasing just one.

A specimen can be added to My Favourites when you are viewing its details. You will find the link on the left-hand side of the specimen details page. We hope you find this new feature helpful.

Regards,

Gary Atkinson
