**Subject:** Update 12th June 2009

Dear Dave Barthelmy

As a service to our many newsletter subscribers every week we will be selecting items of interest to all those who study the earth sciences. These articles will be of a general nature related to earth sciences and not confined to mineralogy or mineral collecting. They can be accessed by going to [Latest Update](#) under the NEWS tab on the AA Mineral Specimens website. These brief updates will be in addition to our usual newsletter.

We are also providing a link to the Encyclopedia of the Earth a huge international online resource of the earth sciences. This reference will be of interest to all those interested in the earth sciences, including mineralogy. The link can be found on the [Useful Links](#) page under the LINKS tab on our website.

Currently we are working on describing an accumulation of significant secondary minerals from a well known Australian collection. These minerals will be added to our site to join the recent addition of opals, rhodochrosite, cuprite, azurite, pyrite, giant actinolite, huge atacamite and cerrusite among others. All can be checked out on our [NEW STOCK](#) page.

All the best,

Susan and Bruce
