Mineral of the Month Club

March 2013

Dear David A.,

Hello:

Just in case you missed or did not have the chance to review this months offerings, I have resent the Offer Sheet and Platinum letter for you to review. Our Featured Mineral of the Month for March is Scolecite from India's Deccan Traps.

Though **Scolecite** was a featured Mineral of the Month several years ago, this variety has completely different look and structure. See the photo below:

The **Offerings** for March are five minerals from China, Mexico, Canada, and Brazil. These specimens range in transparency from water-clear to opaque, and in color from forest-green and emerald-green to pink, purple, and a delicate honey-yellow.

***Click on the link on the top left of the page to see the Offer Sheet and Platinum letter.**

You can place your order via email at

christine@celestialearthminerals.com

or by calling #800-941-5594.

Coming in April...our featured mineral of the month will be Cactus Quartz, a rare form of a very common mineral, amethyst quartz. These specimens, which were collected in South Africa, are examples of two-phase crystal development and have very nice lilac-to-purple colors. Showy in both color and shape, these specimens make fine display pieces. Our write-up will detail the origin of cactus quartz and explain why quartz has more varieties and sub-varieties than any other mineral.

SCOLOCITE

On your entire order every time you order 4 or more items from The Platinum Letter or Office
