New Gmelinites from Nova Scotia and Browse by Coolness

On the website I've added new specimens under Gmelinite – May 2014 Update. This update features sharp, brilliantly lustrous crystals of gmelinite after chabazite from the classic locality Pinnacle Rock, Five Islands, Bay of Fundy, Nova Scotia, Canada. These are from some of the top finds at the locality and are super for the species, from any

locality. The crystal growth patterns on these are exquisite.

There is more information about the gmelinites and the locality within the descriptions of the individual specimens on the website, under "About These Gmelinites".

I have also introduced a new group of browsing categories: Browse by Coolness. In response to a tongue-in-cheek request from a friend (and well-known dealer) that I add certain mundane items to the website, I decided instead to help visitors notice what is so cool about so many of the specimens on the site. Next time you're on, have a look.

For all new specimens at McDougall Minerals, see **New Specimens**.

If you are receiving this email in any format in which the above links don't work, the addresses are:
