# New Yellow Stilbite Balls from Mali

Some great specimens from a new find are now posted on the website under [Mali - July 2014 Update \(click here\)](#). These are beautiful specimens of stilbite crystals in radial groups and balls from new workings at Diamonkara in the Bendougou District, Kayes Region of Mali, which is well known for specimens of prehnite and epidote. The new stilbites are distinctive and really different, with excellent showy yellow colour and good

lustre. There is a fine prehnite on epidote in this update as well.

For all new specimens at McDougall Minerals, see [New Specimens](#).

If you are receiving this email in any format in which the above links don't work, the addresses are:
