New From Mexico

I've added a new [Mexico Update \(click here\)](#) with some super specimens ranging from thumbnail-sized to cabinet pieces.

This group includes new brochantite from the Milpillas Mine - the crystals are robust and entirely different from the fibrous ones we've seen in the past. Also from Milpillas, I have included beautiful deep blue azurites and a striking malachite pseudomorph from there (usually I am not as enthused about the dark pseudos from Milpillas but this one is different!).

While I was in Tucson I managed to track down a few more datolite specimens from Charcas, included in this update - some great crystals on these.

I've also added a pretty combination specimen of smithsonite and anglesite from the San Antonio El Grande Mine.

Finally, just a reminder that prices on the website are in Canadian dollars - a good (approx 20%) discount these days, if you are thinking in (or used to browsing online minerals in) US dollar terms.

For all new specimens at McDougall Minerals, see [New Specimens](#).

If you are receiving this email in any format in which the above links don't work, the addresses are:
