New Diopside from Kazakhstan

There are some beautiful new intense green diopside specimens on the website in this week's [Diopside Update \(click here\)](#).

Diopside was first described in the 19th century from Altyn-Tyube, the type locality for diopside. These specimens are contemporary, acquired from the team currently

conducting specimen mining at Altyn-Tyube.

Hope you enjoy them!

My usual reminder - prices on the website are in Canadian dollars, which trade at a good (approx 20%) discount these days, if you are thinking in (or used to browsing online minerals in) US dollar terms.

For all new specimens at McDougall Minerals, see [New Specimens](#).
