New from China

I've added a selection of fine, distinctive specimens in the new [China Update \(click here\)](#). The pieces in this group are very high quality, picked from many different lots. There are beautiful fluorites of various colours and habits, including stunning clear crystals, and some that are deep blue, green and purple, and there are great phantoms and colour zoning in some of them. The update also includes a great pyromorphite, an unusually fine quality Xiefang golden barite (these are virtually always damaged) with a nice phantom, a super cabinet specimen of Shimen calcite with a large twinned crystal, and excellent lustrous spessartines.

Hope you enjoy them!

My usual reminder - prices on the website are in Canadian dollars, which trade at a good (approx 20%) discount these days, if you are thinking in (or used to browsing online minerals in) US dollar terms.

For all new specimens at McDougall Minerals, see [New Specimens](#).
