New Thunder Bay Amethyst

New Specimens

The specimens in this [Thunder Bay Amethyst Update \(click here\)](#) are truly special – they are the top quality Thunder Bay amethyst. These specimens are from the collection of David Nicklin, representing the best of all specimens he and his son Ian mined at the Diamond Willow Mine over a period of over 30 years. They are absolutely remarkable for their lustre, colours and lack of damage compared to the vast

majority of Thunder Bay amethysts mined over the years. This is a unique opportunity to acquire a Thunder Bay amethyst from a special lot - we don't expect to be able to see a lot like this again in the future.

New Article

A new post/article is on the website: [Thunder Bay Amethyst \(click here\)](#). It features many photos, including an image sequence of the mining process used by David and Ian Nicklin to recover amethyst specimens at the Diamond Willow Mine.

Important Note

This lot of Thunder Bay amethyst specimens is being offered jointly with my good friend and collecting partner David Joyce (www.davidkjoyceminerals.com). Different specimens are posted on each of our websites. I hope you will enjoy seeing the ones on his site too: [click here](#).

Hope you enjoy them!

My usual reminder - prices on the website are in Canadian dollars, which trade at a good discount these days, if you are thinking in (or used to browsing online minerals in) US dollar terms.

For all new specimens at McDougall Minerals, see [New Specimens](#).
