## New from Malawi

A bit further from home than last week's update, I've added a small selection of fine specimens in the new [Malawi Update \(click here\)](#). From Mount Malosa, the world's pre-eminent locality for aegirine, there are several fine aegirine specimens, including a super cluster of radiating crystals, and other excellent pieces with microcline. Also from Mount Malosa are specimens of zircon on quartz and arfvedsonite. On a particularly interesting note, this update includes two extremely sharp, lustrous crystals of aegirine recently found at a different locality, Mulanje Massif, over 100 km south of Mount Malosa.

Hope you enjoy them!

My usual reminder - prices on the website are in Canadian dollars, which trade at a good discount these days, if you are thinking in (or used to browsing online minerals in) US dollar terms.

For all new specimens at McDougall Minerals, see [New Specimens](#).
