New from Namibia

I've added a small group of excellent specimens in the new [Namibia Update \(click here\)](#). From Tsumeb, there are cerussite specimens showing beautiful crystal twinning, also sharp malachite pseudomorphs after azurite, copper, smithsonite, and tennantite. And from the Kaokoveld Plateau I've included fine diopside specimens from Okandawasi.

Hope you enjoy them!

My usual reminder - prices on the website are in Canadian dollars, which trade at a good discount these days, if you are thinking in (or used to browsing online minerals in) US

dollar terms.

For all new specimens at McDougall Minerals, see [New Specimens](#).
