# An Impressive Tsumeb Wulfenite

This week I have added a single specimen on the website, under What's New Blog (click [here](#), not on the usual New Specimens page). This is a remarkable large Tsumeb wulfenite specimen (33 cm), hosting glassy wulfenite crystals up to 1.4 cm on edge. These crystals are sharp, lustrous, and transparent to translucent, with sherry-coloured beveled edges.

This specimen was brought to North America (possibly in the 1960s or 1970s) by well-known Canadian dealer Prosper Williams, who had access to superb Tsumeb specimens

during the mine's production heyday.

Regardless of whether you are interested in acquiring this piece, I hope you'll enjoy the photographs of these beautiful Tsumeb wulfenite crystals.
