## New From Peru

I've added a new group of diverse minerals in this [Peru Update \(click here\)](#). I have selected these over various trips – each is a beautiful specimen for the mineral!

This update includes a gorgeous rhodonite from Chiurucu, a brilliant alabandite, a super specimen of bournonite cogwheel twins on matrix and a specimen of scheelite coated with bright green stolzite. There are also fluorapatite crystals from Huanzala, an unusually lustrous enargite from Quiruvilca, a golden selenite ball in halite, and from the Palomo Mine, fine chalcopyrite-coated sphalerite, and galena with seligmannite.

My usual reminder - prices on the website are in Canadian dollars, which trade at a good (25%) discount these days, if you are thinking in (or used to browsing online minerals in) US dollar terms.

If you are receiving this email in any format in which the above link does not work, the addresses for this update and the New Specimens gallery are:
