New from Mont Saint-Hilaire

I've added excellent new specimens in this [Mont Saint-Hilaire Update \(click here\)](#), from finds 1988-2007. One of the world's great mineral localities, with over 400 species, the quarry has been closed to collecting since 2007 (with isolated exceptions that have not produced specimens in any quantity).

One of the most remarkable aspects of collecting at Mont Saint-Hilaire is that no two occurrences are the same - the mineralized zones and pockets are each different, with varied mineral assemblages and crystal habits. This selection of specimens represents several different unique finds, including beautiful serandites, terminated elpidite crystals, twinned rhodochrosite, sodalite var. hackmanite, narsarsukite, leucophanite, analcime and more.

Hope you enjoy them!

Canadian and US Dollar

The currency disparity remains significant in favour of the U.S. dollar these days. My usual reminder - prices on the website are in Canadian dollars (if you are thinking in - or used to browsing online minerals in - US dollar terms).

For all new specimens at McDougall Minerals, see [New Specimens](#).
