New Iron-Cross Twins From Colombia

I've added a small number of excellent specimens in this [Pyrite Iron-Cross Twin Update \(click here\)](#).

The iron cross twin law is well known and exhibited in pyrite specimens from various localities, but rarely does one find good-sized complete crystals. These remarkable specimens are from a find about a year ago near Gachalá, Colombia. The pyrite crystals are coated with a thin veneer of goethite. They are superb iron-cross twins.

Hope you enjoy them!

Canadian and US Dollar

The currency disparity remains significant in favour of the U.S. dollar these days. My usual reminder - prices on the website are in Canadian dollars (if you are thinking in - or used to browsing online minerals in - US dollar terms).
