## New Tinejdad Quartz

Happy New Year!

I have posted great new specimens in this [Tinejdad Quartz Update \(click here\)](#). The quartz crystals from the Tinejdad area in Er Rachidia Province, Morocco, contain red colouring, red zones, or distinct red phantoms, due to included iron. Ferruginous quartz specimens were first produced from the locality around 2014. A large number of specimens came out soon after, and almost all were damaged. Collecting care improved somewhat, and the quality improved slightly, as the production of specimens decreased, although it has remained a real challenge to find high-quality specimens.

Hope you enjoy them!

## Canadian and US Dollar

The currency disparity remains significant in favour of the U.S. dollar these days. My usual reminder - prices on the website are in Canadian dollars (if you are thinking in - or used to browsing online minerals in - US dollar terms).
