Subject: Stunning Cabinet Specimens

Hello everyone, true to form we will only communicate if we feel we have something really uinique so here goes. We have just acquired a selection of large cabinet sized specimens from Namibia (Including Tsumeb), the Kalahari Manganese Fields as well as a huge cabinet sized specimen of Fluorite from Riemvasmaak, Northern Cape to name a few. It's not often items like this come through and we really wanted to share them with our loyal clients ahead of anyone else. They are all under the "New Tab" on our site so go and have a look

The shipping costs are going to be high (Unless locally shipped) but each and every one of these specimens is worth the effort.

We look forward to showcasing these with you and hope you enjoy them as much as we have

Kind regards

Graham & Nicky at Cape Minerals
